

## Safe in our knowledge

## Our knowledge is your safety

Working within a diverse range of sectors and operating across the world we have encountered most situations and can work with you to find a solution that works for your organisation.

## WHAT WE DO

---

*Health and safety can have more benefits to an organisation than just legal compliance.....*

By understanding your organisation and the specific hazards it faces Safety Advisors work with you to address those hazards. We are not risk averse but more focussed on risk management.

Our team of consultants are highly trained and knowledgeable in their fields of expertise.

Before focussing on health and safety most of our consultants came from a non-health and safety background and so have significant "real world" knowledge of the sectors they are involved in.

Our knowledge is diverse with knowledge of health and safety, fire protection and management and aviation safety and inspection.

Having knowledge of a subject is only part of a successful delivery of any training. All our consultants, who provide training, have nationally and internationally recognised qualifications to deliver training along with specific knowledge of the subject to be delivered.

Safety Advisors have a number of consultants who have specific aviation

qualifications to undertake safety inspections. These reports are provided to members of the various International Air Transport Association (IATA) pools and assist with the safety of air travel.

We are involved in the management of health and safety and fire management for some of the best organisations and some of the most recognisable landmark buildings in the world.

Our success is a result of our contribution to our clients success.

*"Their enthusiasm is engaging and his training style refreshing from the norm."*

*JA, Director, Smith of Derby*

## WHAT IS RISK MANAGEMENT?

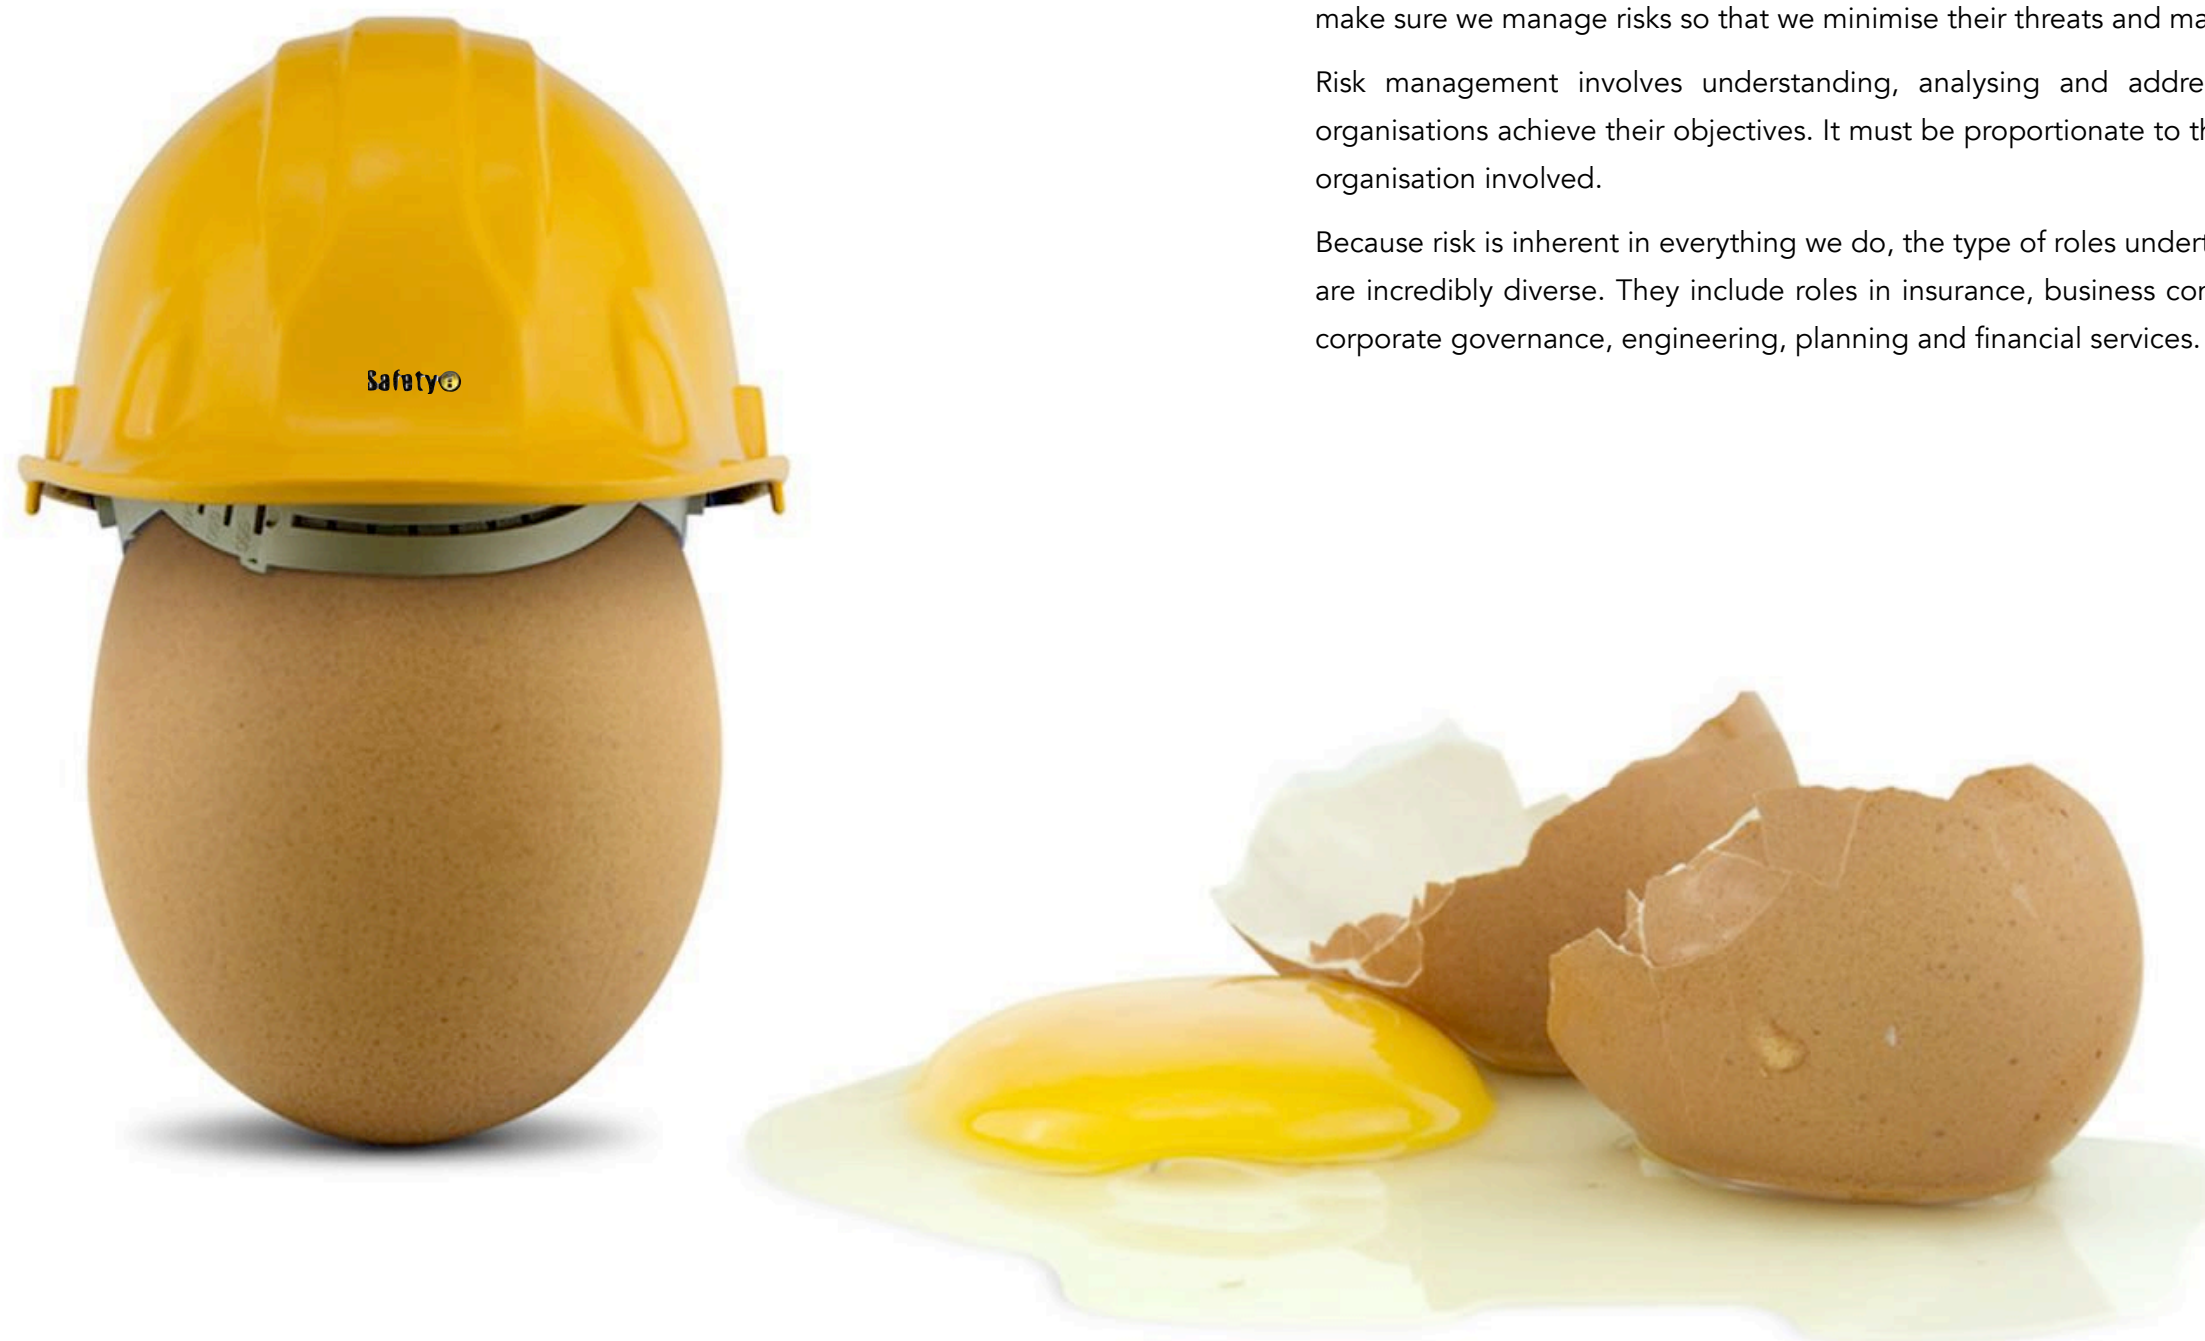

---

Risk is part of all our lives.

As a society, we need to take risks to grow and develop. From energy to infrastructure, supply chains to airport security, hospitals to housing, effectively managed risks help societies achieve. In our fast paced world, the risks we have to manage evolve quickly. We need to make sure we manage risks so that we minimise their threats and maximise their potential.

Risk management involves understanding, analysing and addressing risk to make sure organisations achieve their objectives. It must be proportionate to the complexity and type of organisation involved.

Because risk is inherent in everything we do, the type of roles undertaken by risk professionals are incredibly diverse. They include roles in insurance, business continuity, health and safety, corporate governance, engineering, planning and financial services.

A photograph of a gravel path in a forest. The path starts from the bottom center and splits into two directions: one leading towards the left and another leading towards the right. The forest is dense with tall trees and lush green foliage. The ground is covered with fallen leaves and gravel. The lighting is soft, suggesting a shaded forest environment.

## **Strategic Advice & Guidance**

BASED ON REAL WORLD  
EXPERIENCE

Our consultants can help you deliver a single health and safety project or work with you on an ongoing basis to support your organisation.

The construction industry remains one of the most hazardous industries to work in.

Safety Advisors have a dedicated Construction Health and Safety team that provides a complete solution for Clients, Principle Contractors, Designers and Contractors.

With our in-depth knowledge of both construction and health and safety we are able to advise you and keep everyone safe.

Our construction services include:-

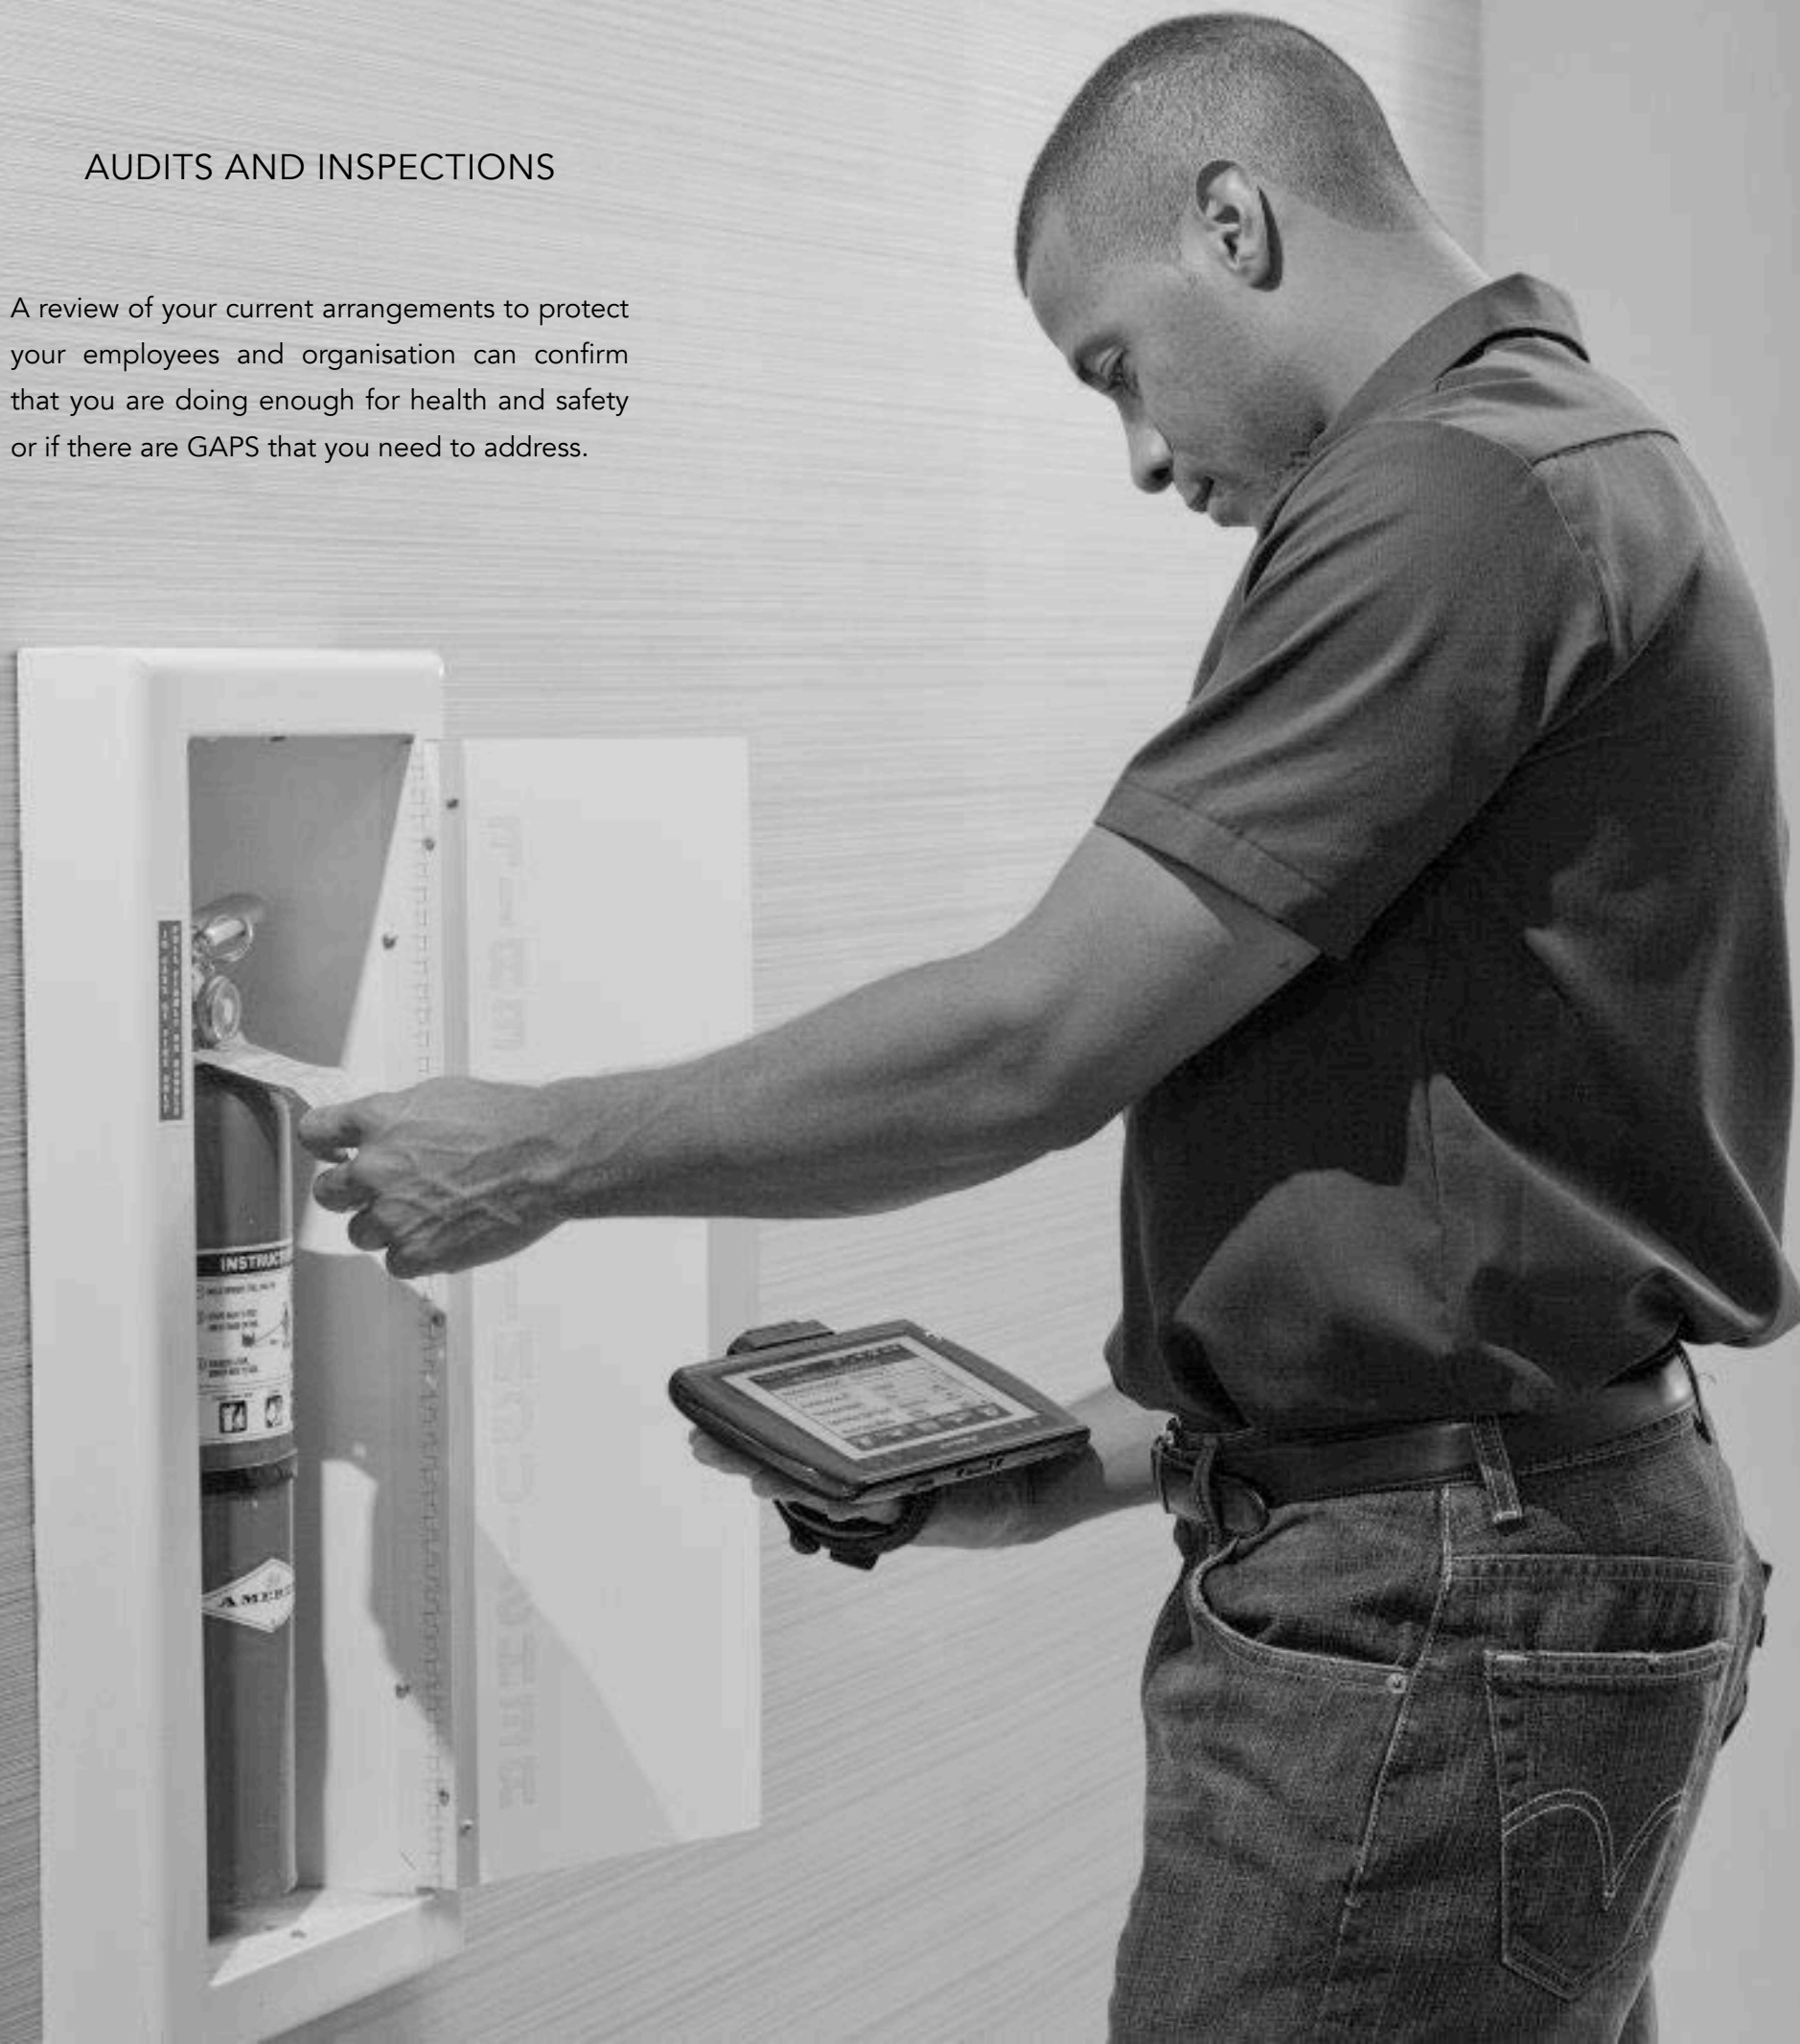

- Principle designer role
- Writing construction phase health and safety plans
- Temporary fire management plans
- CDM Regulation compliance
- Site inspections
- Accident investigations
- Training

## AUDITS AND INSPECTIONS

A review of your current arrangements to protect your employees and organisation can confirm that you are doing enough for health and safety or if there are GAPS that you need to address.

## HEALTH AND SAFETY TRAINING PROVIDER

---

Safety Advisors offers a wide range of Health and Safety training to build the skills of management and staff.

We try and tailor our courses to make them relevant to the organisations individual needs.

Courses include:

- Site Managers Safety Training Scheme (SMSTS)
- Site Supervisors Safety training Scheme (SSSTS)
- First aid
- Fire marshal
- Aviation training

# We know about fire

Fire can have a devastating affect on both people and buildings.

Our fire knowledge is extensive having been involved in all aspects of fire management including:-

- Fire strategy
- Fire planning
- Design
- Equipment supply and install
- Fire assessments
- Fire maintenance
- Insurance appraisals
- Inspection

# Regulatory Reform (Fire Safety) 2005

What do I have to do?

Employers (and/or building owners or occupiers) must carry out a fire safety risk assessment and keep it up to date, once the building is in **use**. Carry out a fire safety risk assessment and have a management plan in place

- Keep sources of ignition and flammable substances apart
- Avoid accidental fires, e.g. make sure heaters cannot be knocked over
- Ensure good housekeeping at all times, eg avoid build-up of rubbish that could burn
- Consider how to detect fires and how to warn people quickly if they start, eg installing smoke alarms and fire alarms or bells
- Have the correct fire-fighting equipment for putting a fire out quickly
- Keep fire exits and escape routes clearly marked and unobstructed at all times
- Ensure your workers receive appropriate training on procedures they need to follow, including fire drills
- Review and update your risk assessment regularly

# What's the value?

- Significant knowledge
- Legal compliance
- Costs of service out weigh the costs of fire
- Prevent fines and/or prison
- Fixed price

## AVIATION

---

The International Air Transport Association (IATA) is so concerned with the quality of aviation fuel they have set up a dedicated organisation tasked with ensuring the fuel is of suitable quality. The International Fuel Quality Pool (IFQP) are concerned with all aspects of the aviation fuel including the manufacture, airport receipt, storage, supply and into-plane aspects of aviation fuel safety.

There are an estimated 130 IFQP qualified fuel auditors worldwide. Safety Advisors is proud to be part of this pool with nine of our consultants gaining this qualification and able to carry out inspections and training

## AVIATION - DE-ICING / ANTI-ICING QUALITY POOL

---

The De-Icing/Anti-Icing Quality Control Pool known as DAQCP currently consists of about 100 member airlines and through its active members, performs inspections on approximately 600 companies that provide de-icing/anti-icing services and post de-icing/anti-icing checks at more than 300 airports worldwide.

Unfortunately there have been a number of incidents that have been directly caused by poor de-icing practices and the inspections go a long way to reduce the number of these accidents. The DAQCP inspects all aspects of the process of de-icing and post de-icing treatment of an aircraft. These inspections are vital to ensuring aircraft are safe to fly .

---

*There are approximately 120 IATA/DAQCP approved inspectors worldwide.*
